DÖHLEMANN

döfix Wave tape

Flexiwave

- The iron-on "K" adhesive eliminates the need to pin the tape to the fabric. Once it is ironed on, the tape can be easily sewn-on.
- The spacing between the pins can be individually selected to match a repeat in the fabric.
- The extraordinary springiness of the *Flexiwave* tape assures perfect and even waves.
- Easy fabrication. Curtain pins can be inserted at the markers for a standard fullness of 1.5 : 1 or 2.0 : 1.
- Wave cord in *Click* Technology allows for an effortless installation. Glides can be inserted into the track at any position.
- Wave curtains made with the döfix *Flexiwave* system can be washed and dry-cleaned like a regular drapery.
- Available with a glide spacing of 6 cm for 2.0 : 1 fullness and 8 cm spacing for 1.5 : 1 fullness.
- Two styles of glides to fit tracks with a channel of 4 mm (döfix tracks) and for tracks with a 6 mm channel.

„Click“

Wave cord in
Click Technology
allows for an
extremely
effortless
installation.

Fullness:

variable or according to the woven-in markers.
